

## ***Old ways of deodorizing and sanitizing don't work as well as prospective buyers deserve & demand***

Buyers demand clean, odor-free living areas; a musty smell can be the difference between a property that's sold and one that sits on the market for months. Help your sellers — and yourself — by cleaning and sanitizing newly listed homes with the Just Gone Sanitizing & Deodorizing System™.

Whether the problem is airborne or on surfaces, you can remove all residual creators of these serious problems — faster than other methods and at surprisingly little addition cost.

The Just Gone Sanitizing & Deodorizing System™ uses a technologically advanced process to sanitize and deodorize areas without the

need for toxic chemicals, fragrances or services, which require manual wiping and rinsing. In a fraction of the time needed by other sanitation systems, the Just Gone Sanitizing & Deodorizing System™ can sanitize against a multitude of germs, allergens, odors and indoor contaminants in all areas.

#### NOTHING ELSE COMPARES

*Most sanitizing systems are complex or messy, and many deodorizing systems just cover up odors. Only the Just Gone System destroys odors completely and is incredibly fast to apply.*

***One of the first impressions potential buyers notice is the smell of a home. Are your listings musty with odors and the unseen bacteria that cause them? Now, before the staging or the first showing, you can eliminate both.*** You need to take action now to get rid of these pesky problems that risk not only losing potential buyers, but also exposing them to dangerous molds and other microorganisms.

What can be sanitized quickly and easily with this system?

- Living areas, including hard and soft surfaces
- Walls and floors
- Swimming pool and hot tub tiled areas
- And many more, too numerous to list

***Here is a partial list of some of the 'bad stuff' that Just Gone™ gets rid of...***

#### Viruses

- Ebola (as of 2014)
- C Diff (as of 2014)
- Hepa (as of 2014)
- MRSA

#### Bacterial

- E.Coli
- Legionella
- Pneumophila
- Streptococcus Facalis
- Bacillus
- Clostridium
- Amoebae
- Giardia
- Cryptosporidium
- Pseudomonas

***And thousands more!***
