

# Dynabook Configuration Services

Save Time. Save Money. Increase Productivity.

Dynabook Configuration Services are available for all our business-class Tecra® and Portégé® laptops.

Manually imaging, configuring and customizing a fleet of new laptops is a slow and tedious process that can result in your organization losing time, money and productivity.

## Let Dynabook do it for you.

With unrivaled attention to detail, our technical professionals will work directly with you and your IT staff, tailoring a customized solution and assembling everything you need right at the factory—without delaying shipment.

## Why Dynabook?

### More than three decades of business innovation

Dynabook is the world's laptop pioneer, with an unrivaled track record of helping businesses like yours succeed with leading-edge mobile solutions.

### We control the entire process

For unmatched quality and reliability, our Tecra® and Portégé® PCs are designed, engineered and manufactured at Dynabook facilities. The same goes for our image development.

### All image development performed locally

Based in the U.S., Dynabook engineers can be reached for feedback or consultation in your time zone—for convenient collaboration and faster turnaround time.

# Dynabook Configuration Services

## Imaging Services

Provide your own corporate image, or work with Dynabook engineers to create a custom image that meets your organization's exact specifications. We can load any qualified Windows® OS, along with specific solutions crucial to your business from Adobe®, McAfee®, Microsoft® or Norton™ as well as your proprietary business applications.

Dynabook's factory-level imaging services make it easy for your organization to start using its new computing assets right out of the box – saving time, money and improving overall efficiency.

## BIOS Configuration

Dynabook can customize BIOS settings to maximize your specific hardware and software configuration. Our engineering team can also apply a BIOS version lock for added assurance.

## Asset Tagging

Dynabook can help you reduce loss or theft of your assets, and improve the ability to track your laptops from the moment the computer leaves our facility. With physical and/or electronic asset tags, you can quickly and accurately import asset information into your internal IT management systems.

## Asset Reporting

Dynabook creates detailed IT Resource Reports for its Configuration Services customers, which includes the following information – Asset Tag ID, Part Number, Serial Number, LAN MAC Address, Wireless MAC Address and Packing Date – all to assist our customers to manage and monitor its mobile computing IT resources.

## Custom Boot Logo

Customize your laptop by adding your organization's logo to the boot screen and subtlety add another deterrent against theft.

## Absolute®

Because we own the manufacturing process, we can ship with the Absolute BIOS agent enabled and software activated.
