WALL CLOCK—DATAMAXX 3300

Integrated labor tracking, job cost, materials and equipment with Windows technology

Tracking and collecting employee time to increase your company's profitability has never been more important.

So, Data-Maxx made it easy by bringing its powerful labor tracking and reporting capabilities to the DataMaxx 3300 wall clock. Now, you get comprehensive data collection and two-way data integration in a touch screen capture environment.

The Data-Maxx 3300 wall clock solution provides powerful two-way data integration with over 100 of today's most popular accounting software

packages. You simply bring information over from your accounting system automatically, and on an ongoing basis, as well as sending the information back quickly and easily using the Data-Maxx interface.

The user-friendly interface is menu-driven and features predefined drop-down lists for labor, equipment, materials, inventory, production, and daily reporting. Employees, jobs, and cost codes are also available via drop down

POWERFUL TWO WAY INTEGRATION

Two-way integration means less work and current, accurate information for your busy supervisors as well as your accounting and payroll staff. Up-to-date drop-down menu information can be transmitted to your DataMaxx 3300 wall clock from any Data-Maxx- supported accounting system and dropdown choices can be controller per device. When the home office adds new employees, jobs, cost codes, tasks, etc., into the accounting system, that information is collected by Data-Maxx which sends it to your clock.

Transferring data into your payroll system is also fast and easy. Once the data has been synced to the office, you have the opportunity to review, edit, approve, or print reports on it from our administrative software. It can then be imported into most accounting systems

EASY TO USE INTERFACE

Employee information, jobs, tasks, and equipment worked on can be collected and stored directly into your DataMaxx 3300 clock. The clock supports Ethernet, WI-FI, and MI-FI connections to fit in any environment. It's rugged, locking case allows you to mount it or simply have it as a portable time clock. The clock itself can run on AC power or battery power. Battery backup typically lasts three (3) hours, but depends on use.

Employees can be clocked in or out, and switched to different jobs, and or tasks within the same job. Data may be entered by direct key entry, drop-down menus (which can be pre-populated by Data-Maxx), or by scanning in the information.

With DataMaxx, you can produce bar codes for your employees, as well as other data and scan them in. You can choose different types of employee identification on the DataMaxx 3300 clock including bar code swipe, bar code gun, fingerprint reader, and RFID reader.

User definable prompts can be selected per clock such as Employee, Job, Task, Etc. With just the Employee prompt turned on the employee just touches the type of operation such as IN, OUT, etc. scans their card or enters their number and it's as simple as that to clock in.

You can collect data in real time or after-the-fact at the end of the day. In real time mode, the device applies the date and time for the arrival, departure and switching of employee. Employees can switch from job to job or task to task an unlimited number of times throughout the day.

Up-to-the-minute Reporting

Use the DataMaxx 3300 wall clock to collect and process daily work force information. DataMaxx provides over 60 reports and places important management information at your fingertips:

- Time employees arrived and departed from the job, and the jobs/tasks they have worked on
- Time and labor costs
- Equipment used on the job and when it was checked in or out
- Materials moving in and out of the job
- Production quantities installed on the job
- Service work orders completed or in process

And yes, you can use DataMaxx to track temp employees and sub-contractors as well!

Keep track of your business wherever you do business
