TRAXX SMARTPHONES & TABLETS

Integrated labor tracking, job cost, materials and equipment with ANDROID, Apple, and Windows Technology

Tracking and collecting data on labor, equipment, materials, and productivity to increase your company's profitability has never been more important.

So, Data-Maxx made it easy by bringing its powerful labor time, equipment, materials, and inventory tracking and reporting capabilities to your handheld Smartphone or tablet. Now, you get comprehensive data collection and two-way data integration for most Smartphone and tablet devices equipped with ANDROID, Apple iOS, and Windows operating systems.

The Data-Maxx Smartphone / Tablet solution provides powerful two-way data integration with over 100 of today's most popular accounting software

packages. You simply bring information over from your accounting system automatically, and on an ongoing basis, as well as sending the information back quickly and easily using the Data-Maxx interface.

The user-friendly interface is menu-driven and features pre-defined drop-down lists for labor, equipment, materials, inventory, production, and daily reporting. Employees, jobs, and cost codes are also available via drop down

POWERFUL TWO WAY INTEGRATION

Two-way integration means less work and current, accurate information for your busy supervisors in the field as well as your accounting and payroll staff. Up-to-date drop-down menu information can be transmitted to your Smartphone or tablet from any Data-Maxx-supported accounting system. When the home office adds new employees, jobs, cost codes, tasks, etc., into the accounting system, that information is collected by Data-Maxx which sends it to your device on the next "sync".

Transferring data into your payroll system is also fast and easy. Once the data has been synced to the office, you have the opportunity to review, edit, approve, or print reports on it from our administrative software. It can then be imported into most accounting systems with a few keystrokes.

EASY TO USE INTERFACE

Employee information, jobs, equipment/materials, inventory, and tasks can be collected and stored directly into your Smartphone/tablet device and the application runs on your device in disconnected state, meaning it does not need an internet connection in order to run.

Employees can be clocked in or out, switched to different jobs, and or tasks within the same job. Data may be entered by direct key entry, drop-down menus (which can be pre-populated by Data-Maxx), or by scanning in the information. Dropdown choices can be controlled per device via the administrative software.

With DataMaxx, you can produce bar codes for your employees, and scan them in. On Smartphones and tablets, we automatically utilize the camera to scan the bar code. NFC card recognition is also available with ANDROID devices for employee identification.

You can collect data in real time or after-the-fact at the end of the day. In real time mode, the device applies the date and time for the arrival, departure and switching of employee. Employees can switch from job to job or task to task an unlimited number of times throughout the day. Crew features are also available making it easy to clock in, out, or switch specific work crews.

Up-to-the-minute Reporting

Start using your Smartphone or tablet to collect and process daily work force information.

DataMaxx provides over 60 reports and places important management information at your fingertips:

- Time employees arrived and departed from the job, and the jobs/tasks they have worked on
- Time and labor costs
- Equipment used on the job and when it was checked in or out
- Materials moving in and out of the job
- Production quantities installed on the job
- Service work orders completed or in process

And yes, you can use DataMaxx to track temp employees and sub-contractors as well!

Keep track of your business wherever you do business
