

Introduction to "Push to Connect" fittings

To connect air lines insert into the fitting and push firmly.

The 3/8" NPT is the thread size needed for the Four Play and Touché. NPT stands for National Pipe Thread. You can buy "Push to Connect" fittings on one side for 1/4", 3/8" or 1/2" air lines with 3/8" NPT on the other side. Wrap Teflon tape on NPT threads when installing the fittings for a good seal. The Fourplay and Touche valves are designed to handle the same air flow that will go through a 1/2" air line. Use 1/2" air line for maximum speed. Note - 1/2" air lines are bulky and don't bend as easy. More difficult to run through the fire wall. 1/4" air lines are easier to run but it won't move as fast. 1/4" air lines are not slow, just slower than 1/2". Also, the air line you use should be an air line that is designed for "Push to Connect" fittings.
